FIRST QUESTION

Life Expectancy Has Worsened In Nashville

THE MAIN FINDING

The average life expectancy in Nashville moved from 77.0 years for 2015-2017 to 75.1 years for 2020-2022.

Earlier Period

77.0 years

Latest Period

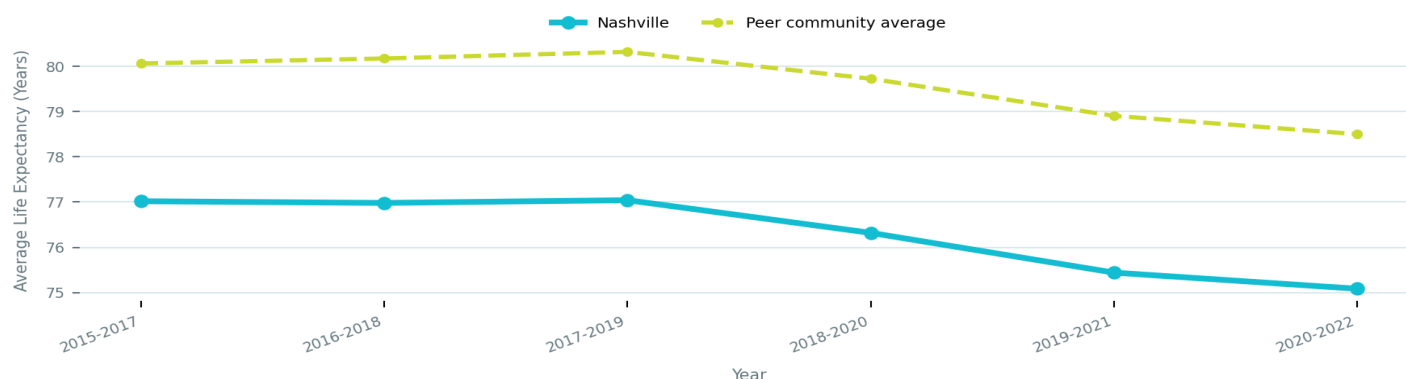

75.1 years

Overall Direction

Worsened

How Life Expectancy Has Changed In Nashville

Data periods: 2015-2017 through 2020-2022. Each point is one estimate that summarizes the full date range shown, not a separate value for every year. The dotted line is the peer community average.

WHY THIS MATTERS

This gives a broad picture of the health of a community and reflects many health and social factors.

HOW TO READ THE RESULT

The latest peer community average is 78.5 years. Each point is one estimate that summarizes the full date range shown, not a separate value for every year.

Measure: The average number of years people in the county are expected to live.

What You Can Explore Next

01

Look at related health, care, housing, income, and community conditions before treating life expectancy as a one-cause problem.

02

Use data broken down by neighborhood, age, race, income, or other groups when available to see who may need the most support.

03

Share the finding with residents and local partners, choose a practical next step, and track the measure as new data are released.

How Nashville And Peer Communities Compare On Adult Smoking

Nashville and eight peer cities. Data year: 2020. Published in the 2023 CHR&R release.

WHY THIS MATTERS

Smoking raises the risk of cancer, heart disease, lung disease, and early death.

HOW TO READ THE RESULT

Nashville's value is about 34% higher than the peer community average. Nashville has the weakest result among the 9 communities compared. For this measure, lower values are considered stronger.

Measure: The share of adults who currently smoke cigarettes.

What You Can Explore Next

01

Help residents find free quit support, and make sure outreach reaches communities with the highest smoking rates.

02

Look at related barriers such as stress, mental health, insurance, and access to care.

03

Track smoking rates and use of quit-support services as new data become available.

How Nashville And Peer Communities Compare On Households With Very High Housing Costs

Nashville and eight peer cities. Data period: 2019-2023 (one estimate summarizes the full period). Published in the 2025 CHR&R release.

WHY THIS MATTERS

When housing takes up this much income, families have less money left for food, health care, transportation, and other needs.

HOW TO READ THE RESULT

In the latest usable comparison, Nashville is at 15.9% and ranks 6 of 9. The peer community average is 15.1%.

Measure: The share of households that spend at least half of their income on housing.

What You Can Explore Next

01

Look at rent, income, eviction risk, transportation costs, and access to housing support by neighborhood.

02

Ask residents and housing partners which supports are hardest to find or use.

03

Track housing costs together with food insecurity, child poverty, and mental health.
